

Large scale deployment of telehealth services for chronic condition management

What is New Tools for Health?

Michael Peolsson process leader

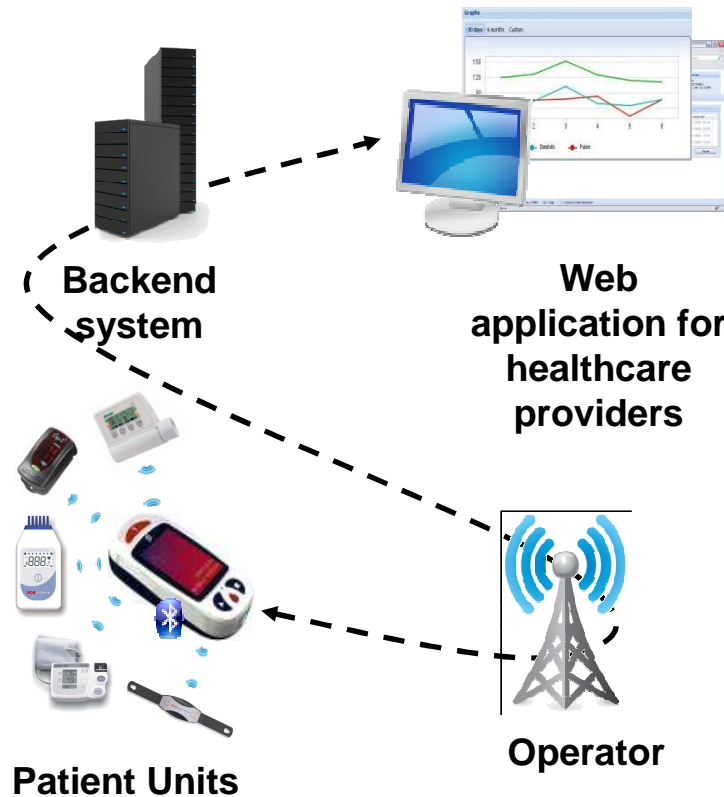

- A regional growth initiative in East Sweden
- Home-based care and independent living
- A non-profit organisation
- Funded by the Swedish Governmental Agency for Innovation Systems, VINNOVA, municipalities, the county council, industry and university
- Focuses: ICT and sensor solutions for heart failure, diabetes, fall prevention and social inclusiveness

New Tools for Health

Implementing a centre for distributed home based heart failure care in Linköping, Östergötland County Council, Sweden

› Convenience

- Take your measurements from everywhere
- Stay home or in the office

› Personalization

- Have control over your own health

› Cost Control

- Less visits to the caregiver
- Less time spent on measurements

- World leading clinical competence in heart failure treatment
- World leading competence within biosensors/bioelectronic (Linköping Bio-sensor and Bio-electronic centre)
- Global industrial partner within telecommunication
- Industrial ICT network
- Unique competence within health economics for heart failure
- Unique medical care infrastructure within county council based on advanced care facility for heart failure outpatients

We would like to discuss partnership within future EU projects addressing telehealth services for home based heart failure treatment
